So, I'm just getting into Solar. I was going to go with a 48 volt system, they're cheaper, and from what I've read, generally better, you need double the batteries from a 24 volt system, but that also gives me far more battery life. However, from what I've seen, they appear to be more complicated as far as the solar panels are concerned.

In this comprehensive guide we will walk you through everything you need to know to design and install a fully functioning 24-volt solar system. Whether you want to power your homestead or business with solar, read on to learn the basics of assembling an effective 24V solar system from scratch.

Solar installations be built out as 12, 24, or 48 volt systems. Most RV's and boats have 12V battery banks, so people usually stick with the 12V panels in order to be compatible with those. You may consider a 24v solar panel system if you have high energy needs. If your energy needs are about 1 to 3 kW, we'd recommend a 24 volt system.

[Pros & Cons] 12V VS 24V . Note: When we mention a 12V or 24V system, we are talking about the battery bank. 24V Battery Pros. Cheaper to build (Wire size is less demanding than 12V) Less amp required on charge controller; High wattage solar panels can be used; Build for medium size solar power systems; Great for series connection

Many solar charge controllers are rated for both 12V and 24V systems, which means adapting your charge controller to a 24V system shouldn't be a problem. A 24V system makes it possible to connect for larger loads using the same wires. For example if you have a 20A charge controller paired to a 12V system, you can only hook up 260W to it. But ...
