

# 5 kilowatt solar panel price San Marino

How much does a 5 kilowatt solar system cost?

The average 5-kilowatt (kW) solar panel system is \$14,210 before considering any financial incentives. However, a typical American household needs a system closer to 10 kW to adequately power their home, which costs \$28,241 in 2024. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

What factors affect the cost of a 5kW Solar System?

Apart from the location, there are more factors affecting the 5KW solar system cost, such as solar panels, charge controllers, and inverters. Solar panels come in different sizes, types, and shapes, and these factors can affect the cost of the solar system. Among them, the type of solar panels plays an important role.

How much electricity does a 5 kW solar system use?

The cost of electricity where you live is the biggest determinant of your solar savings. The table below shows the average estimated electricity production numbers for 5 kW solar energy systems in cities across the U.S. By comparison, the average household in the U.S. uses 893 kilowatt-hours (kWh) a month, which equals 10,715 kWh per year.

Is a 5kW Solar System a good option?

A 5kW solar system could be a great option for reducing your energy bill and decreasing your carbon footprint. A 5kW solar system can produce roughly 7,300 kWh of energy annually. If a family consumes the national average of electricity, the 5 kW system would cover about 69% of the total electricity needs.
