This decides the power range of the PV system as well as the inverter power rating needed to integrate with the grid. The power range can vary from a few watts (W) to kilowatts (kW) to megawatts (MW). Different PV systems have different power handling capability and based on this the solar PV architectures are classified as shown in Fig. 3.

Basically, a solar inverter is a critical balance of system (BOS)-component in a photovoltaic system, allowing the use of ordinary AC-powered equipment. For this reason, solar inverters have special functions adapted for use with photovoltaic arrays, including maximum power point tracking (MPPT) and anti-islanding protection.
