

Can Angola achieve energy self-sufficiency?

Angola has everything it needs to achieve energy self-sufficiency through renewable sources - not only water, but also sun and wind. With these three natural resources, Angola could achieve the transition from oil and gas to renewable energies, and then boost its energy self-sufficiency.

Does Angola need solar energy?

Angola already boasts an impressive renewable energy component in its energy matrix, primarily derived from water resources. However, we recognise the potential for solar energy to complement this matrix and provide essential energy security.

Can Angola deploy pumped-storage hydroelectricity & hydrogen solutions?

Fernando Prioste, CEO of COBA Group, talks to The Energy Year about Angola's potential for deploying pumped-storage hydroelectricity and hydrogen solutions as it develops a robust energy industry and the central role of COBA Group in the country's power arena.

Why is the Angolan government supporting solar power projects?

The Angolan government is supporting the development of several new solar power projects, in an effort to accelerate the country's energy transition and reduce reliance on diesel- and coal-fired power generation.

Should Angola invest in energy storage solutions?

With the ongoing solar projects under development in Angola with an installed capacity amounting to 500 MW, it is urgent to start thinking about efficient energy storage solutions. What structural challenges must be addressed for Angola to seize its renewable energy potential?

What are the major photovoltaic projects in Angola?

The Quilemba Solar Power Park is another major photovoltaic project underway in Angola, backed by PPP among France's Total Eren (51%), Angola's Sonangol (30%) and local renewable developer Greentech (19%). Located in Lubango, the capital of Angola's Huíla Province, commercial operations of the 35 MW solar plant are expected by the end of 2023.

Angola already boasts an impressive renewable energy component in its energy matrix, primarily derived from water resources. However, we recognise the potential for solar energy to complement this matrix and provide essential energy security.
