Bolivia: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Onshore wind: Potential wind power density (W/m^2) is shown in the seven classes used by NREL, measured at a height of 100m. The bar chart shows the distribution of the country's land area in each of these classes compared to the global distribution of wind resources. Areas in the third class or above are considered to be a good wind resource.

The Fitch rating agency in February downgraded Bolivia's debt deeper into junk territory, assigning it a CCC rating. And the fight over MAS is exacerbating economic woes. Morales' allies in Bolivia's Congress have consistently thwarted Arce's attempts to take on debt that would relieve the pressure.
