Why are oil and natural gas production rising in Argentina?

Crude oil and natural gas production in Argentina are both nearing record highs, driven by increasing output from the Vaca Muerta shale formation, which is offsetting declining output from conventional oil and natural gas fields.

Why did Argentina's natural gas imports fall 47% in 2024?

Argentina's natural gas imports via pipeline fell by 47% in the first nine months of 2024 compared with the same period in 2023. The decline was largely because pipeline imports from Bolivia, which made up around half of Argentina's natural gas imports in 2023, ended in September 2024.

How much natural gas is produced in Argentina?

An average of 5.0 billion cubic feet per day (Bcf/d) of natural gas was produced in Argentina over the first nine months of 2024, 5.2% more than the same period in 2023. In August, natural gas production averaged 5.4 Bcf/d, the most of any month in 21 years.

Will Argentina export liquefied natural gas by 2032?

The government's goal is to export \$15 billion worth of liquefied natural gas annually by 2032, up from zero currently. "Until now, all gas projects were done by the state as public works. Now that's not an option," said Daniel Dreizzen, Argentina's former secretary of energy planning and now director of Aleph Energy, a consulting firm.

How much natural gas is produced in Vaca Muerta?

The Vaca Muerta formation accounts for more than 70% of Argentina's natural gas production, reaching 74% (3.8 Bcf/d) in September 2024. Rising production of crude oil and natural gas from the Vaca Muerta formation has increased export opportunities for both fuels.

Can Argentina become a major gas exporter?

REUTERS/Alexander Villegas Purchase Licensing Rights NEUQUEN, Argentina, Nov 21 (Reuters) - Natural gas production is booming in Argentina's vast Vaca Muerta shale lands, but full pipelines and the government's free-market approach to paying for new ones may prevent the country from becoming a major gas exporter by early next decade.
