

Argentina solarni komplet

Does Argentina have a potential for solar energy utilization?

Conclusions Our work found a large gap between Argentina's potential for solar energy utilization and the current solar energy deployment, despite advantages such as a high solar and land resources.

Can Argentina abridge the solar gap?

Finally, a discussion on the main ingredients required to abridge Argentina's solar gap indicates that stronger, consistent long-term strategies are required in Argentina in order to take advantage of the present window of opportunity, and to play a considerable role in the global energy transition.

Is PV development a 'window of opportunity' in Argentina?

PV development in Argentina was provided an initial 'window of opportunity' in 2006 by Law 26190 'National Promotion for the use of renewable sources of energy in the production of electricity', which promoted the use of renewable energy sources to reach 8% of the Argentinean electric matrix by 2016.

Will Argentine become a high-technology PV manufacturer?

Regarding larger module production volumes, a key Argentine organization planning to become a high-technology PV manufacturer is EPSE (Energía Provincial Sociedad del Estado). The company, owned by the Province of San Juan, manages and distributes the conventional and alternative energy produced in its territory.

Is there a gap between photovoltaic installations in Argentina?

This gap is, however, not static: different legal frameworks and governmental promotion programs have led to the deployment of large-scale and distributed off-grid photovoltaic installations, but they are at a volume (in terms of installed capacity) that lags years behind other countries with which Argentina shares relevant characteristics.

What is the contribution of photovoltaic electricity to Argentina's grid system?

The first contribution of photovoltaic electricity to Argentina's grid system occurred in 2011, with a participation of 0.0014% to the total electricity demand, which is a modest contribution to the 1% incidence of renewable energy (RE) at the time, which included small, i.e., ≤ 50 MW, hydroelectric plants.
