Figure 3: Power delivered by the LLC converter with a resistive load . From 143kHz to 272kHz, for  $R_{out} = 8.9\Omega$ , both curves are completely identical. But below 143kHz and above 272kHz, they aren't equivalent anymore. Figure 3 shows the output power of the LLC (resistive load mode) for fixed frequency values and  $R_{out}$  ranging from  $1\Omega$  to  $50\Omega$ .

Here is the Energy Time Curve main screen: This shows a typical ETC measurement, made by simply snapping fingers in a small office, using External Trigger mode (see below). You can see the initial peak sound, and then the decay of the sound over time.
