The answer may lie in an innovative new battery technology going into mass production - sodium batteries. Traditional lithium-ion (Li-ion) batteries have served us well, but their limitations are clear. Cycle life is limited, charging is sluggish, and supplies of raw lithium are not only far from infinite but susceptible to geopolitical forces.

The introduction of battery energy storage systems (BESS) facilities will greatly enhance the island's ability to integrate renewable energy into the grid, stabilise power supply, and reduce dependence on fossil fuels.
