

In the next installments, we will examine some of North Korea's recent power station projects, including the Orangchon Power Station, which was recently completed after 40 years of work, and North Korea's latest policy of ...

Prioritizing the development of off-grid renewable energy in North Korea, such as solar panels and wind turbines, near under-electrified rural areas will provide a more significant number of North Koreans with access to ...

In this new series, 38 North will look at the current state of North Korea's energy sector, including the country's major hydro and fossil fuel power stations, the state's push for local-scale hydro, the growing use of renewable ...

The East Sea is surrounded by South Korea, North Korea, Japan, China, and Russia and is connected to the Northwest ... border is in contact with North Korea, so the supply of energy is ...

More than 80 percent of North Korea is mountainous with cultivation largely confined to coastal strips in the east and west. [4] According to a United Nations Environmental Programme report in 2003, forest covers over 70 percent of the country, mostly on steep slopes. [5] However, other studies have suggested that, due to deforestation, forest cover was only about 50%. [6]

In 2022, North Korea's electricity consumption leaned heavily on both low-carbon and fossil energy sources. More than half of the electricity, approximately 58%, was generated from low-carbon sources, with hydropower contributing almost entirely to this segment at nearly 58%. Meanwhile, fossil fuels accounted for roughly 42% of the electricity supply, dominated ...
