The integrated modular battery backup unit (BBU) is a smart charging and monitoring system. When the system AC power is turned off on the IR8100, the installed BBU supplies power to the router. The BBU also allows graceful shutdown of events on the router based on the configured voltage level thresholds.

Replace the battery backup unit as soon as possible. See Isilon: How to Check the Battery Wear Threshold for a Gen6 Cluster for additional information. The underlying causes for most battery test failures are resolved in OneFS 8.1.0.4 and later, and Node Firmware Package version 10.1.6 and later (DEbcc/EPbcc version 00.71).
