

How can Bess help Vietnam achieve energy transition objectives?

Beyond grid stabilization, BESS plays a pivotal role in advancing Vietnam's energy transition objectives. By effectively managing energy supply and demand, BESS contributes significantly to achieving targets for renewable energy adoption and diminishing reliance on fossil fuels.

Can Bess be integrated into Vietnam's power grid?

In an effort to facilitate the integration of BESS into Vietnam's power grid, the Electricity and Renewable Energy Authority (EREA) of the Ministry of Industry and Trade recently hosted a technical workshop in collaboration with GEAPP.

What is Bess & why is it important in Vietnam?

BESS emerges as a critical enabler in Vietnam's transition towards a future of energy efficiency, security, and sustainability. By storing surplus energy during low-demand hours and utilising it in times of high demand, BESS eliminates power shortages and blackouts, thus enhancing the reliability of the grid and reducing electricity costs.

Is Bess technology a viable option in Vietnam?

(Source: Nang luong Viet Nam Magazine.) Although BESS technology initially faces cost challenges, rapid global market expansion and advancements in battery technology are progressively making it more viable. Vietnam has acknowledged the potential of BESS and has articulated plans for its extensive integration into the national grid.

Will Vietnam achieve 300 MW of Bess by 2030?

Vietnam's Power Development Plan VIII (PDP VIII) aims to achieve 300 MW of BESS by 2030. While BESS is relatively new in Vietnam, many countries have already adopted this technology due to its benefits, which include peak shifting, frequency and load management, renewable energy integration, black start capabilities, and transmission deferral.

Could Bess be useful for a country like Vietnam?

As an example of how BESS could be useful for a country like Vietnam, currently the country has approximately 320 solar power projects (with a capacity of 34,000 MW) and 300 wind power projects (with a capacity of about 74,000 MW) proposed to be fed into the National/Provincial Power Development Plan between 2021 and 2023.

The joint venture is collaborating with Honeywell to integrate Vietnam's first grid-connected battery energy storage system (BESS) project in the 50 MWp Khanh Hoa Solar plant. The project aims to demonstrate the commercial viability, ...

BESS begins to become cost-effective in Vietnam, if BESS all-in costs cross below approximately \$200/kW + \$100/kWh (the lower end of the range of 2022 BESS costs across Southeast Asia. 4). o Where BESS is cost-effective, the value of combined PV plus BESS is greater than the value of standalone PV plus the value of standalone BESS.

BESS relies on one or more batteries to store energy, which can then be used at a later time. These batteries may be charged using excess electricity generated by solar power plants during periods of low demand. ...

Vietnam's Power Development Plan VIII (PDP VIII) aims to achieve 300 MW of BESS by 2030. While BESS is relatively new in Vietnam, many countries have already adopted this technology due to its benefits, ...

3. The Current State of BESS in Vietnam. As of 2024, Vietnam has practically no BESS installed. So far, only private renewable power projects have trialed BESS development, there is nothing at the utility scale. The largest electricity storage project in Vietnam is the Bac Ai Pumped Storage Hydropower Project.

According to energy expert Nguyễn Văn Nhàn, it is necessary to raise incentive policies to promote the development of BESS. First, BESS should be developed at projects of ...

AC Energy staff at the 2019 inauguration of a 330MW Vietnamese solar farm. Image: AC Energy via Facebook. A battery energy storage system (BESS) will be retrofitted to a utility-scale solar PV power plant ...

This study analyses and anticipates the challenges that may arise in frequency stability in Vietnam's power system by 2030, when the renewable energy integration is expected to increase, with the objective to gauge the scope of averting these challenges with Battery Energy Storage System (BESS).

Vietnam is at the forefront of a transformative shift towards renewable energy, with Battery Energy Storage Systems (BESS) emerging as a cornerstone technology in ensuring grid stability. ...

The Ministry of Industry and Trade (MOIT)'s Electricity and Renewable Energy Authority (EREA) and the Global Energy Alliance for People and Planet (GEAPP) hosted a technical workshop this month focused on ...

The BESS project aims to demonstrate the commercial viability of battery energy storage in Vietnam and showcase the practical benefits of renewable energy, including its reliability and efficiency.

Marubeni will begin its side of the cooperative work with a feasibility study of battery energy storage system (BESS) installations which could be installed at commercial and industrial (C& I) locations of VinGroup, VinES" ...

According to the Institute of Energy under the Ministry of Industry and Trade, Vietnam's power system needs BESS at both renewable energy generators and the national power grid. The 8th National Power Development Plan (PDP8) has taken into account the high integration rate of renewable energy into the power system with a

goal that Vietnam's ...

Experts are urging Vietnam to develop Battery Energy Storage Systems as the country accelerates towards renewable energy sources to guarantee energy security and sustainable development. "The institute under the Ministry of Industry and Trade proposed that Battery Energy Storage Systems would be essential for integrating renewable energy into both ...

Battery energy storage system (BESS or ESS) is a system that uses cells (cells) made of common compounds used in batteries such as Lithium-ion, Nickel, Sodium ... as energy storage elements. ... With the increasing ...

Hanoi (VNS/VNA) - Vietnam needs to consider the development of battery energy storage system (BESS) while the country is on a path towards promoting renewable energies to ensure energy ...

Solar PV power generation in Vietnam could about to be maximised through the integration of battery energy storage systems (BESS), with consultancy AqualisBraemar LOC Group (ABL Group) hired to ...

15 October 2021 - Vietnam's pilot utility-scale battery energy storage system [BESS] will soon take shape in Khanh Hoa Province after an agreement was signed today between AMI AC Renewables and the U.S. Consulate in Ho Chi ...
