

Is Botswana rebalancing its power mix?

Botswana's current installed capacity of 890MW, is dominated by coal resources (99%) and the country is in the process of rebalancing the power mix by involving the private sector in building additional capacity in renewable energy sources.

What is integrated energy planning in Botswana?

Integrated Energy Planning and developing an Integrated Resource Plan (IRP) are an integral part of the energy planning process in Botswana as guided by its 11th National Development Plans (NDP 11) and other sector policies and ambitions. In the energy sector, the NDP 11 focuses on increasing self-reliance on the country's energy resources.

What is Botswana's energy policy?

A prominent objective of the Policy is to achieve a substantive penetration of new and renewable energy sources in the country's energy mix; the goal is to attain adequate economic energy self-sufficiency and security, as well as positioning Botswana to fulfil its vision in becoming a regional net exporter, especially in the electricity sector.

What is Botswana's energy potential?

For Botswana, the following technical potentials were identified: Wind (high capacity factor) - 1 152 MW. The least-cost analysis estimated a potential of 199 MW from renewable energy, 139 MW of which in utility-scale projects and 60 MW of-grid. The firm reserve margin would reach 23% in 2030, with zero net imports.

What is Botswana's primary energy supply?

Botswana's total primary energy supply (TPES) is fossil-based and largely reliant on oil products and coal, complemented by biomass and waste energy. A large proportion of TFEC comes from biomass energy in the form of traditional wood fuel (27.8%).

Why is energy important in Botswana?

Energy is recognised globally as essential to the economic development of any country and is considered a key driver for economic growth in the most important sectors of the economy. n.d). The current account balance of Botswana for 2019 shows a service sector at deficit of - 0.7% of the national GDP.

To this end, the country's first Integrated Resource Plan (IRP), which was approved in August 2020, provides the national framework for energy planning, that identifies priority renewable and thermal energy projects to meet growing energy demand.

The International Renewable Energy Agency (IRENA) in close collaboration with the Ministry of Mineral

Resources, Green Technology and Energy Security (MMGE) in Botswana conducted a Renewables Readiness ...

The International Renewable Energy Agency (IRENA) undertook an evaluation of the national energy sector in 2021 and found that Botswana could meet 15% of its energy needs in 2030 from its indigenous solar, wind, and bioenergy resources.

Botswana: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

BERA is responsible for providing an efficient energy regulatory framework for Electricity, Gas, Coal, Petroleum products, solar and all forms of renewable energy. It was established by the Botswana Energy Regulatory Act 2016. It started its operations on the 1st September, 2017 and its offices are situated in Lobatse. [Read More](#)
