

#### Who is HES energy systems?

HES Energy Systems was founded in 2009 and took on a new life in 2015 as part of H3 Dynamics - a new group formed and led by Horizon co-Founder Taras Wankewycz. If you experimented with educational fuel cells as a student, chances are - we made them.

What type of energy is used in Brazil?

The Brazilian electricity sector (BES) is characterized as a large hydrothermalsystem. Most electrical power is supplied by low cost (renewable) hydropower plants, while a minority of higher-cost power is generated from thermal power plants using fossil fuels (natural gas and coal) and biomass (BRADSHAW,2017; SILVA,2011; D'ARAÚ JO,2009).

Why does Brazil need a hybrid energy system?

In Brazil, there is a need for more renewable electricity generation; great potential for hybrid projects due to the complementarity of resources, and great potential for hybrid projects due to the established higher performance and synergy of such projects. The current regulatory framework does not support hybrid projects.

Can centralized wind-PV HES plants help the Brazilian electricity matrix?

Hybrid plants reduce project implementation costs and would help maintain the high penetration of renewable energy in the Brazilian electricity matrix. In this way,the need for expansion and diversification of the national electricity matrix can be partially metby centralized wind-PV HES plants.

How much electricity does Brazil use?

In 2018,the domestic electricity supply was 636.4 TWh,and the final consumption was 535.4 TWh. Renewable energy supplied 83.3% of the total generation in the Brazilian electricity matrix.

Can Brazil generate electricity from wind and solar energy? Brazil has a considerable potential for electricity generation from wind and solar energy.

possibility of centralized combined wind and PV hybrid energy systems is a fairly recent issue in Brazil. Northeast there are favorable characteristics for Wind-PV Solar HES. Development of ...

H3 Dynamics is a leading enterprise in Hydrogen Fuel Cell technology for Aerospace, Military, Defense, and Commercial applications. Over the past 10 years, H3 Dynamics has been developing and delivering high performance and lightweight Integrated Hydrogen Fuel Cell Systems all over the world.

HES Energy Systems. Follow. 0 followers. HES designs, manufactures, and commercializes the world"s lightest fuel cell systems for aerial mobility and autonomous devices in the field. ... Drones to begin safety inspection of hydropower dams in Brazil. Most popular. Saudi Arabia to invest \$4B in treated water reuse

projects. SWPC launches pre ...

According to HES Energy Systems, a French-Singaporean company, the solution could be using hydrogen and fuel cells. HES Energy Systems is not new to this kind of technology: when they started in 2003 they were producing tiny fuel cells, but now they scaled up their products and HES Energy Systems is among the world leaders in the industry.

HES Energy Systems established its first laboratories in Singapore in 2008. From there, it began its journey with an international customer base in the unmanned aerial vehicles (UAV) sector, and later broadened its scope to ultra-light portable power systems, and off-grid remote sensor power solutions, and looking at scaling up its power capacity to address ...

possibility of centralized combined wind and PV hybrid energy systems is a fairly recent issue in Brazil. Northeast there are favorable characteristics for Wind-PV Solar HES. Development of more hybrid power plants could provide another alternative for more security of energy supply. Hybrid plants reduce project implementation costs and would

With lighter on-board energy, comes longer electric-powered flight durations. Since then, several leading UAV developers from around the world began approaching HES to adapt HES technology to a number of UAV platforms. To further focus on this specialized area, in 2009 a separate subsidiary was created in Singapore called HES Energy Systems.

The Hycopter drone - designed at H3 Dynamics" facility in Texas [FCB, December 2018, p5] - is also equipped with new data acquisition software, which has been successfully tested at a hydropower dam site owned by regional energy company Copel.Data collected by the Hycopter links to H3 Zoom. AI, a new AI-assisted inspection platform to speed ...

Singapore-based company H3 Dynamics has collaborated with Brazil's EPH Engineering to launch a turnkey inspection solution for hydropower dams. The new solution combines artificial intelligence (AI)-enabled damage assessment ...

According to HES Energy Systems, a French-Singaporean company, the solution could be using hydrogen and fuel cells. HES Energy Systems is not new to this kind of technology: when they ...

HES Energy Systems. HES designs, manufactures, and commercializes the world's lightest fuel cell systems for aerial mobility and autonomous devices in the field. HES was founded in Singapore in 2009 and now spans the globe with offices in France and the United States. Since 2006 AEROPAK powered all kinds of mini fixed-wing UAVs around the world ...

Singapore-based company H3 Dynamics has collaborated with Brazil's EPH Engineering to launch a turnkey inspection solution for hydropower dams. The new solution combines artificial ...

H3 Dynamics develops hydrogen solutions for Airports, Aircraft and Drone OEMs, as well as AI-powered maintenance & security solutions for global enterprise clients. We enable both large aircraft and smaller ones, extending the range of of electric UAS, while also deploying autonomous drone stations as a service platform across industries.

Renewable energy sources such as wind and solar power are proving strategic and assisting Brazil to expand and diversify its electricity matrix. Large scale wind energy in Brazil began in 2009, and hundreds of new wind farms have been installed since then.

HES Energy Systems is a leading enterprise in hydrogen fuel cell technology for aerospace, military, defense, and commercial applications. Over the past 10 years, HES has been developing and delivering high performance and lightweight integrated hydrogen fuel cell systems all over the world. HES makes it their commitment to deliver quality and ...

Singapore-based company H3 Dynamics has collaborated with Brazil's EPH Engineering to launch a turnkey inspection solution for hydropower dams. The new solution combines artificial intelligence (AI)-enabled damage assessment and Hycopter fuel cell drones that can fly over three hours at a time.

Publication ID Patent Title Status First Filing Date Technology (CPC) Citations; US-20220131214-A1: High energy density fuel cell apparatus and system with a hydride-based hydrogen generator as a scalable power solution concept

H3 Dynamics has partnered with Curitiba-based EPH Engineering in Brazil, a firm that specializes in hydropower design, dam inspections and safety plans, to launch a turnkey dam inspection solution that combines AI-enabled damage assessment and HYCOPTER fuel cell drones capable of flying 3.5 hours at a time. With over 5,000 dams submitted to the Brazilian ...

Singapore-based H3 Dynamics has partnered with EPH Engineering in Brazil, which specialises in hydropower design, dam inspections and safety plans, to launch a turnkey dam inspection solution that combines artificial intelligence (AI)-enabled damage assessment and Hycopter hydrogen fuel cell drones capable of flying for 3.5 hours at a time.

In BRAZIL, demand for high-performance HES systems is rising, as homeowners prioritize durability, lower maintenance, and longer cycle life. Focus on Modular and Scalable Storage Solutions: Modular HES systems that allow for capacity expansion based on household needs are becoming popular, providing flexibility and affordability. In BRAZIL ...
