

Is Burkina Faso suitable for solar PV and wind development?

The findings of this study indicate that a portion of Burkina Faso's land area is suitable for solar PV and wind development.

Can Burkina Faso achieve 95% electricity access?

The country aims to reach 95% electricity access, with 50% in rural areas and universal access to clean cooking solutions in urban areas, with 65% in rural areas by 2030, up from 9% in 2020. The utilisation of Burkina Faso's renewable resource potential would enable the country to reduce its heavy reliance on thermal generation and energy imports.

How accurate is land cover classification in Burkina Faso?

This dataset has been extensively validated using in situ information from 3 134 stations around the world. As such, the accuracy of the land cover classification is approximately 62.6% (Bontemps, et. al, 2011). Figure 8 shows the land cover for Burkina Faso.

How will Burkina Faso improve electricity trade with neighbouring countries?

Additionally, the results from this report are intended to inform the design and development of the country's regional projects as Burkina Faso is planning to enhance electricity trade with neighbouring countries through regional interconnectors with Benin, Niger, Nigeria and Togo.

What is Burkina Faso's road network?

The road network considered in this analysis was provided by the National Observatory of Territorial Economy office in Burkina Faso. It includes the national, regional and departmental roads across the country as shown in Figure 6. Figure 6. Burkina Faso's road network

What are the 7 criteria for solar PV and wind power projects?

The seven criteria considered (resource quality; transmission line network; road network; topography; protected areas; population density; and land use) are explained in detail in terms of their effect on the planning of solar PV and wind power projects. The second section of this report explains the data sources for each criterion.
