

Calculation of photovoltaic bracket for fishery-light complementary

Does fishery complementary photovoltaic (FPV) power plant affect radiation and energy flux?

Meanwhile, the underlying surface of PV in land is significantly different from those in lake. The fishery complementary photovoltaic (FPV) power plant is a new type of using solar energy by PV power plant in China. The studies of the impact of FPV on the balance of both radiation and energy flux have been less presenting.

Are fishery complementary photovoltaic power plants a new surface type?

The deployment of photovoltaic arrays on the lake has formed a new underlying surface type. But the new underlying surface is different from the natural lake. The impact of fishery complementary photovoltaic (FPV) power plants on the radiation, energy flux, and driving force is unclear.

What are the coordinates of the fishery complementary photovoltaic demonstration base?

The central coordinates of study area 32°17'55" N, 119°47'39" E, and the altitude is 2 m. The fishery complementary photovoltaic demonstration base is composed of four ponds of 5.7-8.9 acre. The FPV is located on the central the pond with about the water depth from 2.5 m to 3 m.

Why is temperature difference important in fishery complementary PV power plant?

The difference in temperature in various water layers benefits the cultivation of different fish in the fishery complementary PV power plant. Fig. 6.

What is fishery PV power (FPV)?

Nevertheless, the research sites are located on land, but land resources are scarce. The fishery PV power (FPV) plant is a new type of solar energy constructed on the water surface to avoid occupying land resources. Additionally, the efficiency of solar energy is greater than that of land because of the cooling effect of the lake .

Does PV power generation affect energy balance closure in FPV power plant?

The period of robust power generation of the FPV power plant was selected to analyse the energy balance closure. We attempted to reveal the impact of the PV power generation process on the degree of energy balance closure by comparing the EBR inside and outside the FPV power plant. The EBRs at different time spans are shown in Table 2.

The fishery-solar hybrid power station uses paddy and pit resources to realize the complementary development of fishery and photovoltaic power generation without occupying agricultural, ...

????????????????, ?????????????, 2020?8?20 ??????????????. ?????????????????pH ?????????????? ...

The fish-light complementary model can make full use of solar energy resources and reduce the dependence on traditional energy sources, so as to achieve the purpose of energy saving and emission reduction. In addition, complementary ...

Calculation of photovoltaic bracket for fishery-light complementary
