

# Can you use rooftop solar power for your own use

Can a roof be used for solar panels?

You can also have a good-performing solar panel system if you have an east and west-facing roof, as you will have exposure in both the morning, afternoons and evenings. Your roof may be unsuitable for solar panels if it faces north, as this will have a direct impact on your generation. How can I calculate the orientation of my roof?

Can a flat roof hold solar panels?

This is because a solar panel system usually weighs about 20kg per square metre, which the great majority of roofs can hold. However, flat roofs may not always be strong enough for solar panels. Drilling into a flat roof can cause leaks, so an installer will usually ballast the panels instead - but these will add around 80kg per panel.

Can solar panels be installed on a glass roof?

Glass roofs: As they are too fragile to support the solar panels and fixings. Nevertheless, if your roof isn't suitable for solar panels there are other options too. For example, you may be able to install ground-mounted solar panels to take advantage of any shade-free land you own.

Can a UK roof support solar panels?

As long as your roof is pitched, has enough unshaded space, and doesn't contain spray foam insulation underneath, it should be suitable for solar panels. The large majority of UK roofs are more than capable of supporting solar panels for as long as you need them to.

Which roof is best for solar panels?

Roof space, which is the same as about two car parking spaces. A south-facing roof is ideal for generating the most electricity from the sun, but panels facing east or west can also work well. North-facing roofs aren't recommended. If you don't have enough sloping roof space, you could install solar panels on a ground-mounted system.

How many solar panels can be installed on a roof?

Your roof will need to be large enough to fit a suitable number of solar panels, as there's rarely much point putting just two or three panels up there. The average solar panel takes up 2m<sup>2</sup>, and your installer should leave around 40cm on each side of the array, as well as 3cm between every panel.

Project Sunroof is a solar calculator from Google that helps you map your roof's solar savings potential. Learn more, get an estimate and connect with providers. Enter a state, county, city, or zip code to see a solar estimate for the area, ...
