

We are mainly active on four aspects of our future green and smart energy system: dynamic and integrated modelling and simulation of “smart grid”; applications to evaluate energy scenarios, smart solutions and new business models,

Energy management strategies for system planning, sizing, and diverse case solutions were examined, showcasing how power electronics can enhance the efficiency and reliability of energy storage, pivotal for the integration of renewable energy sources.

We are mainly active on four aspects of our future green and smart energy system: dynamic and integrated modelling and simulation of “smart grid”; applications to evaluate energy scenarios, ...

With energy contracting you are supplied with directly usable energy without having to worry about it. We offer tailor-made, innovative energy solutions delivered on a turnkey basis and take care of your energy supply from A to Z. This is a long-term service provided by a single partner.

As a driving force behind the energy transition, Enovos relies on cutting-edge technologies and deploys innovative solutions based on strong local partnerships. With the aim of accelerating the energy transition in Luxembourg, since 1998 Enovos has been developing energy production from renewable sources in the Grand Duchy by setting up ...

Connected Energy provides electric utilities with a suite of smart grid solutions that support advanced distribution automation from substations through customer premises. Our solutions collaborate across the grid, helping utilities increase efficiency and reliability to improve their financial, operational and environmental performance.

Thanks to its interdisciplinary expertise in pioneering fields such as biogas and biofuels, building energy technology, thermal- and electrical energy, power electronics and control engineering, along with advanced measurement technologies, the department is committed to addressing the challenges of modern energy solutions.

Connected Energy provides electric utilities with a suite of smart grid solutions that support advanced distribution automation from substations through customer premises. Our solutions collaborate across the grid, helping utilities increase ...

The Intelligent Clean Energy Systems (ICES) unit aims to develop ground-breaking market-oriented solutions and services for clean energy systems, in which distributed and flexible markets and networks, based on clean and efficient assets, use digital technologies to integrate all the system players in an optimal, transparent and

democratic manner.

In recent decades, Luxembourg has shifted from basic infrastructure upgrades to more complex digital solutions. The early smart city initiatives, like the Hollerich Village project, focused on creating sustainable, zero-energy districts, paving the way for today's more comprehensive smart living plans.

In a review of Luxembourg's energy policies launched today, the International Energy Agency welcomes the progress the country has made on reinforcing security of its energy supply, integrating its gas and electricity markets at the regional level, prioritising research and development in clean energy and eco-innovation, and taking strong ...

Thanks to its interdisciplinary expertise in pioneering fields such as biogas and biofuels, building energy technology, thermal- and electrical energy, power electronics and control engineering, ...
