In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of recent publications that include utility-scale storage costs. The

In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are developed from an analysis of 19 publications that consider utility-scale storage costs. The suite

The US National Renewable Energy Laboratory (NREL) has updated its long-term lithium-ion battery energy storage system (BESS) costs through to 2050, with costs potentially halving over this decade. The national laboratory provided the analysis in its "Cost Projections for Utility-Scale Battery Storage: 2023 Update", which forecasts how BESS ...

Even in the Stated Policies Scenario (STEPS), which is based on today's policy settings, the total upfront costs of utility-scale battery storage projects - including the battery plus installation, other components and developer costs - are projected to decline by 40% by 2030.

Cost Details for Utility-Scale Storage (4-Hour Duration, 240-MWh usable) Current Year (2021) : The 2021 cost breakdown for the 2022 ATB is based on (Ramasamy et al., 2021) and is in 2020\$. Within the ATB Data spreadsheet, ...

Base year costs for utility-scale battery energy storage systems (BESSs) are based on a bottom-up cost model using the data and methodology for utility-scale BESS in (Ramasamy et al., 2023). The bottom-up BESS model accounts for major components, including the LIB pack, the inverter, and the balance of system (BOS) needed for the installation.
