

Cummins energy solutions Paraguay

We develop customized solutions to meet your energy needs, whether they are for continuous, peaking, combined heat and power or a waste-to-energy application. We work with you to develop power plants that combine our centralized "factory" knowledge with our distributors' local knowledge and proximity.

The training - the first for the region and following a cogeneration seminar in Mexico a few months earlier - served as a forum to discuss new solutions in energy and new technologies to bring to Latin American markets.

Recent events hosted in Paraguay and Bolivia have highlighted the role Cummins plays in Latin America, and the impact Cummins is making on power companies, regional players and national governments.

As operators seek out energy solutions that are efficient and sustainable, cogeneration is one that maximizes efficiency by producing electrical and thermal energy from a single fuel source. Also called combined heat and ...

As operators seek out energy solutions that are efficient and sustainable, cogeneration is one that maximizes efficiency by producing electrical and thermal energy from a single fuel source. Also called combined heat and power (CHP) systems, cogeneration cuts energy consumption and operation costs.

Los eventos recientes que se han celebrado en Paraguay y Bolivia han destacado el papel que desempeña Cummins en Latinoamérica y el impacto que Cummins está haciendo en las compañías de energía, los actores regionales y los gobiernos nacionales.

Today, more companies are investing in low carbon solutions across the power generation and industrial markets, including mining marine and rail. These solutions include battery-electric and fuel-cell battery hybrid systems as well as internal combustion engines (ICEs) powered by hydrogen.
