

Does Czechia have a solar boom?

Finally, Czechia is also experiencing a second solar boom, with the total added PV capacity in 2023 surpassing 1 GW, marking Czechia's return to the GW-market stage after 13 years. The country, having experienced a solar boom in the past, was one of the first significant PV markets in Europe.

How many solar power plants did Czechia build in 2023?

Czechia built around 1 GW of new PV plants in 2023, according to data from the Czech Solar Association (Solání Asociace). In total, 82,799 solar power plants were connected to the grid, with a combined total output of 970 MW. The nation achieved a record-breaking year with 145% growth, connecting 49,000 more power plants than it did in 2022.

How many solar power plants are in Czechia?

A total of 82,799 solar power plants were connected to the grid in Czechia last year. Image: CEZ Group Czechia recorded a significant increase in installed solar capacity last year, with about 970 MWp of capacity added to the grid. However, the growth was mainly driven by household rooftop solar, according to the Czech Solar Association.

Why is the solar market growing in Czechia?

The figures mark a period of rapid growth in Czechia's solar market. The growth has been largely driven by residential PV, with most of the new installations (80,069) being domestic PV plants, supported by the country investing an additional CZK 55 billion (\$2.5 billion) in its New Green Savings program back in March 2023.

Does Czechia need more energy storage capacity in 2023?

Czechia registered strong PV capacity growth in 2023, driven by a surge in residential installations. The nation's PV association says it expects a shift toward larger power plants in the coming year, but notes the need for more energy storage capacity.

What will the solar market look like in 2023?

In 2023, each of these Eastern European nations experienced substantial growth, collectively constituting more than 7% of the solar market. The future also looks promising, with all countries expected to consistently remain above the 1 GW threshold.

The optics of implementing solar projects with agricultural land could help accelerate ground-mounted solar in Czechia, and with just half a per cent of the entire agricultural land, it would...

3 ???· The Czech lower house of parliament has approved plans to retroactively cut feed-in-tariffs (FIT) for solar projects built between 2009 and 2010. The local solar sector has ...

Czechia built around 1 GW of new PV plants in 2023, according to data from the Czech Solar Association (Solární Asociace). In total, 82,799 solar power plants were connected to the grid, with a...

Finally, Czechia is also experiencing a second solar boom, with the total added PV capacity in 2023 surpassing 1 GW, marking Czechia's return to the GW-market stage after 13 years. The country, having experienced a solar boom in the past, was one of the first significant PV markets in Europe.

According to the Czech government, the programme aims to achieve energy savings in final consumption, with measurement including the development of solar PV systems. In contrast, there were only 2,730 company and land-based solar PV plants added last year, with a total output of about 140MWp.

Changes in Legislation - In Jan 2023 Czech Parliament approved an amendment of Energy Law enabling from Feb 2023: streamlining of permitting procedures for new PV plants with capacity over 1 MWp incl FPV operation of PV plants up to 50 kWp without licence + energy sharing of produced PV energy amongst households+ development of community PV ...
