

Czechia power energy industry company

What is the energy industry like in the Czech Republic?

Czech industry has a long history of supply activities in the energy sector; historically, 90% of the equipment was manufactured domestically, including key components for nuclear power plants.

How much energy does the Czech Republic emit per capita?

The EU average was 7.9 tons per capita. Czech Republic's emissions were comparable to those of Japan or the Netherlands. In 2023, the city of Brno is working to modernise its heat generation and distribution infrastructure.

What is the energy mix in the Czech Republic?

The Czech energy mix was made up of 53.60 percent fossil fuels (47.50 percent lignite, 5.86 percent natural gas, etc.), 40.95 percent nuclear power, and 5.46 percent renewables (3.34 percent biomass, 1.47 percent solar, 0.63 percent water, etc.).

Is coal still used in Czech power generation?

Coal still provides most of the fuel used in Czech power generation. While coal's phase-out is assumed in 2035-2038, coal-based energy companies already face difficulties due to the rising costs of carbon credits and other impacts of the EU's Green Deal.

What makes CEZ Group a successful power generation company?

The foundation of power generation at CEZ Group are emission-free sources. The CEZ strategy named Clean Energy for Tomorrow is based on ambitious decarbonisation, development of nuclear energy, and a significant increase in the number of renewable sources of energy that we build for our customers' needs.

Does the Czech Republic produce natural gas?

The Czech Republic has no significant production of natural gas or oil and is fully dependent on imports. The country is integrated into regional transmission systems and can purchase oil and gas from different countries based on market prices in Rotterdam or elsewhere. Most oil and gas are imported via Germany.
