

Digitalising the energy system Bahamas

How will the Bahamas reform its energy sector?

The Government of the Bahamas has discussed plans to reform its energy sector through a partial-privatization of BEC and by introducing regulation-by-contract principles to meet the capacity for future growth, implementing more economically viable renewable energy sources, and modernizing the energy sector.

Who owns electricity in the Bahamas?

Majority-owned by Emera Inc. Based on average global generation costs for renewable technologies, electricity rates in the Bahamas offer an opportunity for renewable energy to diversify the fuel portfolio and reduce rate volatility.

How will digitalisation impact the energy industry?

Digitalisation will transform the energy system, integrate more renewable energy and enable decarbonisation. Digitalisation has an impact right across the energy value chain, from generation to transport, distribution, supply and consumption.

What is the energy efficiency initiative in the Bahamas?

With energy-related costs estimated at 15% to 20% of annual operating budgets for small- and medium-sized hotels in the Bahamas, the Bahamian hotel industry launched a significant energy efficiency initiative in 2013 in partnership with the Government of the Bahamas to reduce energy-related costs.

How much does electricity cost in the Bahamas?

Located north of Cuba, with the Turks and Caicos Islands to the southeast, the Bahamas has an average electricity cost of \$0.32 per kilowatt-hour (kWh), in line with the Caribbean regional average of \$0.33/kWh.

Will the Bahamas have a solar water heating system?

In the next decade, the Bahamas aims to have solar water heating systems on 20% to 30% of all households, which has the potential of adding 200 GWh of heat for water per year. According to preliminary assessments, wind and solar resources offer the greatest potential for renewable energy development in the Bahamas.

1. Energy Policy Development: Developing and implementing policies to promote sustainable energy use, including renewable energy sources and energy efficiency measures. 2. Energy ...

The government of The Bahamas signed a contract agreement with the Caribbean Centre for Renewable Energy and Energy Efficiency (CCREEE) that will reaffirm its BluePrint for Change ...

The government of The Bahamas signed a contract agreement with the Caribbean Centre for Renewable

Energy and Energy Efficiency (CCREEE) that will reaffirm its BluePrint for Change goal of "a minimum reliance on renewable energy of 30 percent by 2030."

The Ministry of Energy and Transport is committed to driving meaningful reform in The Bahamas' energy and transportation sectors. We aim to modernise outdated systems of energy generation, distribution, and transmission, while developing a safe, efficient, and sustainable transport network across the Islands.

Identify and shortlist digital tools and produce guidance on energy sharing and peer-to-peer exchanges for the benefit of energy communities and their members, as part of the Commission initiative Energy Communities Repository (2023-2024).

The digitalising energy action plan highlights how new technologies can help improve the efficient use of energy resources, facilitate the deployment of renewables and optimise the energy system integration while saving energy and costs for ...

1. Energy Policy Development: Developing and implementing policies to promote sustainable energy use, including renewable energy sources and energy efficiency measures. 2. Energy Sector Regulation: Regulating the energy sector to ensure fair competition, consumer protection, and adherence to safety standards. 3.

Digitalisation of the energy system is key to deliver all these goals. At each step of the supply chain, namely production, distribution, storage, supply, and consumption, digitalisation provides new tools to manage the energy system more efficiently and facilitates the entry of new market participants and the

This document presents The Bahamas' Energy Report Card (ERC) for 2021. The ERC provides an overview of the energy sector performance in The Bahamas. The ERC also includes energy efficiency, technical assistance, workforce, training and capacity building information, subject to the availability of data.

Energy Snapshot Bahamas This profile provides a snapshot of the energy landscape of the Commonwealth of the Bahamas--a country consisting of more than 700 islands, cays, and islets-- of which only 28 are populated. Located north of Cuba, with the Turks and Caicos Islands to the southeast, the Bahamas has an average electricity cost of \$0.32 per

The Government of The Bahamas aims to achieve a significant renewable energy penetration by 2030 in order to replace expensive generation from fossil fuels and reduce dependency on fuel imports. According to the National Energy Plan, the target is to achieve 30% of electricity generation from renewable sources of the total generation portfolio.

The Bahamas is embracing innovative technology to redefine its energy landscape, prioritizing sustainable and resilient solutions across its islands. The shift towards clean energy not only supports environmental goals but also enhances the stability and reliability of power supplies, especially in remote and vulnerable areas.
