

Disadvantages of solar power generation in China

How will China's solar energy development affect the global solar power industry?

As China has the world's largest installed capacity of solar energy, the development of the solar power generation in China will have a profound impact on the healthy development of the global solar power industry. Based on China's experience, the following suggestions are given for the other countries:

Why is solar power a problem in China?

The second is particular to China. Solar PV power generation is mainly installed in the northeast and northwest part of China. These areas are backward in economic development and the power consumption ability is limited. Electricity generated by RE resources confronts a high curtailment rate in some regions.

How will solar PV power affect China's Grid-parity ambition?

Electricity generated by wind and solar PV will account for more than 60% of the total energy supply. In the era of grid-parity, along with China's 2030 carbon peak ambition, it is essential to conduct a holistic analysis of solar PV power from a macro view.

Why does China have a large-scale Solar Energy Curtailment problem?

Because China has a large amount of the installed solar capacity, the existing large-scale solar energy curtailment problem has greatly affected the development of the solar power industry (e.g. the investors' profits) and the long-term development of China's clean energy policy.

What are the disadvantages of solar energy?

An undoubted disadvantage of solar energy is that this technology is not equally efficient around the world.

What are the advantages and disadvantages of solar PV power generation?

Although solar PV power generation has incomparable advantages over conventional fossil fuel energy, just like a coin has two sides, it has its shortcomings. The first is that solar PV power generation has the same characteristics as wind power such as intermittent, volatile, and random.

Due to the fluctuating renewable energy sources represented by wind power, it is essential that new type power systems are equipped with sufficient energy storage devices to ...

However, photovoltaic power generation also has some disadvantages. First, the cost of PV power generation is relatively high, requiring a significant investment. Second, the ...

By the first quarter of 2024, China's total utility-scale solar and wind capacity reached 758 GW, though data from China Electricity Council put the total capacity, including ...
