How do balcony solar panels work?

The most fundamental component of a balcony solar system is the solar panels, which capture sunlight and convert it into direct current (DC) electricity. For balcony setups, it's practical to choose smaller, more manageable panels that can either be mounted on balcony railings or placed on stands.

Can you put solar panels on a balcony?

The main disadvantage of having solar panels on a balcony is that you can't fit as many solar panels on a balcony as you could on a roof. People with particularly large balconies might be able to fit two 400 watt (W) panels, whereas the average roof will fit 10 350 W panels. Fewer panels also mean less electricity being generated.

Are plug-in balcony solar panels a good option?

Plug-in balcony solar panels can be a great option for people living in flats or rented accommodation. They aren't as expensive as regular roof-mounted systems, and they can still save you a little on your electricity bills. If you'd rather get solar panels professionally installed, we can help.

Do balcony solar panels get a rebate?

Depending on your local regulations, this could lead to a rebate on your energy bills. There are 2 overall types of balcony solar panels: 1. Full-size panels. These are the same as any other solar panels, except they're fitted on a balcony rather than a rooftop. Normal solar panels are rated for up to 400W. 2. Mini solar panels.

Do solar panels work on balconies?

Solar panels on balconies can work well, as long as nothing is obstructing light from reaching the panels. For example, balcony walls, nearby trees, or buildings can cast a shadow on the solar panels and reduce their electricity output. The angle and direction the solar panels will also affect their output.

How much do balcony solar panels cost?

Installing balcony solar panels that are connected to the home's electrical system costs around £1,405 for two 350 W panels- most balconies won't have room for more than this. Are there any grants for balcony solar panels?
