

What is energy in Liechtenstein?

Energy in Liechtenstein describes energy production, consumption and import in Liechtenstein. Liechtenstein has no domestic sources of fossil fuels and relies on imports of gas and fuels. The country is also a net importer of electricity.

What percentage of Liechtenstein's electricity comes from non-renewable sources?

In 2016, non-renewable sources accounted for 67,35 % and renewable sources for 32,47 % of Liechtenstein's electricity supply. Energy production from non-renewables consisted of 56,88 % foreign imports of electricity produced by nuclear power, and 0,65 % of electricity produced in Liechtenstein from imported natural gas.

What is eco & ECO3?

It is designed to offset emissions created by energy company power stations. The first obligation period ran from January 2013 to 31 March 2015. The second obligation period, known as ECO2, ran from 1 April 2015 to 31 March 2017. The third obligation period, known as ECO3, ran from 3 December 2018 until 31 March 2022.

Does Liechtenstein use fossil fuels?

Liechtenstein has no domestic sources of fossil fuels and relies on imports of gas and fuels. The country is also a net importer of electricity. In 2016, its domestic energy production covered only slightly under a quarter of the country's electric supply, roughly 24,21 %.

Is Liechtenstein a solar power station?

Samina Power Station, currently the largest of the domestic power stations, has been operational since December 1949. In 2011-2015, it underwent a reconstruction that converted it into a pumped-storage hydroelectric power station. In recent decades, renewable energy efforts in Liechtenstein have also branched out into solar energy production.

When will ECO3 & ECO4 start?

The third obligation period, known as ECO3, ran from 3 December 2018 until 31 March 2022. The fourth iteration, ECO4, commenced on 1 April 2022 and will run until 31 March 2026. The Government obligates the larger energy suppliers to help lower-income households improve their energy efficiency.

Provider of structured energy services intended to bring safety and profitability to energy production operations. The company offers end-to-end tools for the construction, generation, operation, maintenance, and commercialization of energy credits, and delivers monthly reports on the monthly gains and production of client plants, enabling ...
