How reliable is the energy supply in Gambia?

In Gambia's case, the supply is far from dependable; it is erratic to say the least. The issue is unreliable energy supply marred with interminable load sharing derived often from inextricable scheduled maintenance of the power machines.

What is the electricity system in the Gambia?

The existing electricity network in The Gambia consists of a number of separate 33 kV and 30 kV systems fed from local power plants throughout the country. On-going projects are developing the transmission grid to interconnect these systems and establish interconnections with neighbouring systems.

How much does electricity cost in Gambia?

As at 2019, the global average tariff is 0.14 and 0.12 (US\$/kWh) for household and businesses respectively (Globalpetrolprices, 2020), Gambia's tariff is twice the global average. High cost of electricity has its own economic implications which are outside the scope of this piece. That will be a matter in another piece.

Why is access to electricity important in the Gambia?

Providing access to electricity to support inclusive and sustainable socio-economic development is one of the pivotal cornerstones of the Gambia government's priorities as articulated in the national energy sector policies and strategies, and highlighted in the National Development Plan (2018-2021).

Does the Gambia have solar energy resources?

The Gambia has significant solar energy resources which can be deployed via solar PV plants, which have become price competitive with thermal plants and attractive for advancing national renewable energy and greenhouse gas (GHG) reduction targets. IRENA (2018) has estimated national solar potential at 428 MW.

Who financed the electricity roadmap for the Gambia?

The Roadmap was financed by the World Bank, and Task Team Leader Chris Trimble played a key role in reviewing all of the technical background reports. The first electricity roadmap for The Gambia was developed in 2015 and updated in 2017, to serve as the development blueprint for the electricity sub-sector in the short-to-medium term.

Comparatively, partial-home battery backup systems usually store around 10 to 15 kWh. Given that power outages are infrequent in most parts of the country, a partial-home battery backup system is generally all you'll need. But, if your utility isn't always reliable for power, whole-home battery backup may be the way to go.

For power outages, you would require a battery-operated heater for a room or even the whole house. For high heating requirements, the best alternative to battery-operated heaters are the big propane torpedo heaters. These can generate anywhere from 30,000 BTU to 100,000+ BTU and can heat up an entire house in an event of an outage.

But a home charger costs more and you may have to install a 240-volt outlet. The Bolt EV's battery, for example, takes seven hours to fully charge with a 240-volt charger, adding about 25 miles of ...
