Does Laos have a solar power plant?

In addition to hydropower, Laos has also been exploring other renewable energy sources, such as solar and biomass. The country's first large-scale solar power plant, with a capacity of 10 MW, was commissioned in 2018, and several other solar projects are currently under development.

Why is SolarSpace launching a solar project in Laos?

The company said it has an experienced production and management team in Laos, and those people will play a leading role in the development of the nation's clean energy industry. Laos is a new manufacturing location for SolarSpace, which has traditionally been more active in solar projects in the country.

Will Laotian government approve a floating solar energy plant?

In a significant move towards sustainable energy, the Laotian government has granted approval to Liankham Trading Sole Co., Ltd. to conduct a feasibility study for a pioneering floating solar energy generation plant.

Is Laos a power hub?

As part of the Greater Mekong Subregion (GMS) and the Association of Southeast Asian Nations (ASEAN) Power Grid, Laos has been actively participating in cross-border power trade and interconnection projects. The country's strategic location, combined with its abundant hydropower resources, makes it an ideal hub for regional power trade.

How is Laos promoting hydropower development?

The Lao government has been actively promoting hydropower development, both for domestic consumption and for export to neighboring countries, such as Thailand, Vietnam, and Cambodia. In addition to hydropower, Laos has also been exploring other renewable energy sources, such as solar and biomass.

How much power does Laos have?

With the Mekong River running through its territory, Laos has the ability to generate up to 28,000 megawatts (MW) of electricity from hydropower, making it the "Battery of Southeast Asia." Currently, the country has around 6,000 MW of installed hydropower capacity, with plans to increase this to 14,000 MW by 2030.
