

What are the three main energy carriers in Ethiopia?

The three main energy carriers in Ethiopia are refined oil products (diesel, gasoline, kerosene), electricity (from solar radiation, water, wind, heat) and bioethanol (from sugarcane). Bioethanol wasn't produced in substantial quantities until very recently, it makes up 0.4 TWh annually (2017).

Is wind power a viable alternative to hydro power in Ethiopia?

By taking these developments into account, the Ethiopian Ministry of Water and Energy revised its numbers on an economically feasible wind power potential within only a few years from 10 GW to 1,350 GW. Wind power is ideally suited to complement hydro power.

How much electric power can Ethiopia generate?

Ethiopia has the potential to generate over 60,000 megawatts (MW) of electric power from hydroelectric, wind, solar, and geothermal sources. In addition, in 2022 the GOE certified the presence of seven trillion cubic feet of natural gas reserves in the Ogaden Basin.

What is energy sector support in Ethiopia?

The focus of energy sector support in Ethiopia is aligned with Power Africa 2.0 objectives, which include advancing sustainable development through private sector led partnerships, promoting economic prosperity, and an increased focus on the enabling environment, transmission, and distribution. Technical assistance provided includes:

Will electricity replace diesel as energy carrier in Ethiopia?

Electricity is about to replace diesel as the main energy carrier in Ethiopia - but taken all refined oil products altogether (38.5 TWh in 2014), electricity (22.5 TWh in 2016) will still take a few years before it will surpass oil products as main energy carrier.

How does Ethiopia use nonrenewable energy?

Such wastes can be used in households or in industrial processes, for example in thermal processing. Beyond the renewables, Ethiopia also has resources of nonrenewable primary energies (oil, natural gas, coal), but it does not exploit them. It also does not export them.
