

Energy progress inc Finland

How has the Finnish energy sector changed over the last two years?

Especially, events during the last two years have brought irreversible changes to the Finnish energy sector and its future prospects. Finland's rapid reduction in the import of Russian fossil fuels, the deployment of a new nuclear reactor, and strong growth in wind generation, just to mention a few examples.

What is Finland's energy demand?

Finland's energy demand has fluctuated between 1 007 PJ and 1 114 PJ between 2005 and 2021, most of which is consumed by the industrial sector. Finland has achieved its 2020 energy efficiency targets for primary energy consumption (PEC) and final energy consumption (FEC).

How does Finland deal with rising energy prices?

To mitigate the impact of increasing energy prices, Finland has implemented measures such as reducing retail electricity prices, limiting profits for distribution system operators, exploring energy transition investment programs, and preparing a loan guarantee program to support energy efficiency and renewable heating systems (Fortum 2022).

How much electricity is produced in Finland in 2023?

Domestic power generation increased by 13 per cent in 2023 and was 78 TWh (69 TWh in 2022). Nuclear power production increased by 35 per cent and its share was 42 per cent of power production in Finland. About 52 percent of electricity was produced from renewable energy sources in Finland.

What percentage of electricity is produced in Finland?

Nuclear power production increased by 35 per cent and its share was 42 per cent of power production in Finland. About 52 percent of electricity was produced from renewable energy sources in Finland. Wind power generation increased by 25 per cent and covered about 19 per cent of power generation.

What happened to Finland's energy crisis in 2023?

Energy crisis started in autumn 2021 calmed down in 2023. Increased wind power generation capacity and the new Olkiluoto 3 nuclear power plant commissioned in April 2023 have improved electricity self-sufficiency in Finland, and in 2023 Finland was for the first time even a net exporter of electricity on a weekly basis.
