

How will the government encourage energy-saving home appliances?

The government would provide incentives to encourage the use of energy-efficient products and equipment, and evaluate offering tax credits for purchases of energy-saving home appliances, according to the plan.

What is Energy Performance Certification for buildings in Taiwan?

The energy performance certification for buildings in Taiwan is a part of the EEWH evaluation system, as mentioned under "Green certification." The indicators include requirements and recommendations for energy performance improvements to be implemented whenever a building is constructed.

How can a large company save energy?

For large energy users: Through regulatory requirements, raise the annual energy-saving target from 1% to 1.5% for large energy users that reserve a capacity of 10,000 kilowatts (kW) or more. Foster collaboration between large manufacturers and smaller firms along the supply chain to improve energy-saving processes.

How can manufacturers reduce energy consumption?

Foster collaboration between large manufacturers and smaller firms along the supply chain to improve energy-saving processes. Offer tax incentives for investing in energy saving, thus encouraging lower energy consumption.

Is the government implementing a second Energy Transition Initiative?

Since 2024, the government has also launched a second energy transition initiative, developing a diverse range of green energy sources and implementing a program to promote deep energy saving (2024-2027) to continue upgrading energy use efficiency.

Is social housing energy efficient?

In addition, all social housing is required to meet green building standards; the National Housing and Urban Regeneration Center since 2023 has fully adopted planning and design for an energy efficiency level of 1 or better. New social housing under local governments will also be built at energy efficiency level 1 or better beginning July 1, 2025.

The energy performance certification for buildings in Taiwan is a part of the EEWH evaluation system, as mentioned under "Green certification." The indicators include requirements and ...

For existing public buildings: Infrastructure funding approved in 2024 has enabled central and local governments to carry out building energy efficiency improvements and set up renewable energy and energy storage systems, which are projected to annually save 23 million kilowatt-hours (kWh) and reduce emissions
