What is battery energy storage fire prevention & mitigation?

In 2019, EPRI began the Battery Energy Storage Fire Prevention and Mitigation - Phase I research project, convened a group of experts, and conducted a series of energy storage site surveys and industry workshops to identify critical research and development (R&D) needs regarding battery safety.

What is an energy storage roadmap?

This roadmap provides necessary information to support owners, operators, and developers of energy storage in proactively designing, building, operating, and maintaining these systems to minimize fire risk and ensure the safety of the public, operators, and environment.

What is the NFPA 855 standard for stationary energy storage systems?

Setting up minimum separation from walls, openings, and other structural elements. The National Fire Protection Association NFPA 855 Standard for the Installation of Stationary Energy Storage Systems provides the minimum requirements for mitigating hazards associated with ESS of different battery types.

Where can I find information on energy storage failures?

For up-to-date public data on energy storage failures, see the EPRI BESS Failure Event Database.<sup>2</sup> The Energy Storage Integration Council (ESIC) Energy Storage Reference Fire Hazard Mitigation Analysis (ESIC Reference HMA),<sup>3</sup> illustrates the complexity of achieving safe storage systems.

What is a battery energy storage system (BESS)?

One energy storage technology in particular, the battery energy storage system (BESS), is studied in greater detail together with the various components required for grid-scale operation. The advantages and disadvantages of different commercially mature battery chemistries are examined.

How are grid applications sized based on power storage capacity?

These other grid applications are sized according to power storage capacity (in MWh): renewable integration, peak shaving and load leveling, and microgrids. BESS = battery energy storage system, h = hour, Hz = hertz, MW = megawatt, MWh = megawatt-hour.
