

"Equatorial Guinea is doubling down on gas - a key focal point of the global energy transition and investor interest. The country is single-handedly driving one of the most ambitious LNG initiatives on the continent - the GMH - which holds the potential to establish an intra-African gas trade and catalyze gas-based industries across the ...

Equatorial Guinea: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Last year, the Ministry of Mines and Hydrocarbons announced its plans to transform Equatorial Guinea into a Gas Mega Hub by developing several offshore gas hubs and monetizing neighboring gas reserves, driving industrial development and ...

Energy in Equatorial Guinea is an industry with plenty of potential, especially in the fields of oil and natural gas. However, production has been declining in recent years due to under-investment and lack of new discoveries. In 2022, the country produced less than 100,000 barrels of oil per day (bopd) according to OPEC [1] data.
