

Why is energy important for Ethiopia?

Energy is one of the most significant sectors for Ethiopia's economic growth and development and is expected to increase significantly in the medium run. Ethiopia has abundant renewable energy resources and the potential to generate over 60,000 megawatts (MW) of electric power from hydroelectric, wind, solar, and geothermal sources.

What is energy sector support in Ethiopia?

The focus of energy sector support in Ethiopia is aligned with Power Africa 2.0 objectives, which include advancing sustainable development through private sector led partnerships, promoting economic prosperity, and an increased focus on the enabling environment, transmission, and distribution. Technical assistance provided includes:

What are Ethiopia's strategic priorities in the energy sector?

In light of this, the Government of Ethiopia's strategic priorities in the energy sector are: universal electrification access, energy efficiency improvement, decentralized off-grid power generation through the development of renewable energy technologies, and exporting electricity to neighboring countries.

How can ESMAP help Ethiopia achieve universal Electricity access?

By assisting the Government of Ethiopia in incorporating gender-focused solutions, bolstering markets for off-grid products, and scaling up private sector participation in the country's vast renewable energy resources, ESMAP has facilitated new investments, strategies, and approaches to help reach the goal of universal electricity access.

What are the energy development indicators in Ethiopia?

Summary of statistical and projected Ethiopian energy development indicators. Per capita CO₂ emissions in Ethiopia are relatively low as the country produces electricity mostly from hydropower.

What is the energy balance in Ethiopia?

The World Development Indicators and many other studies [.,.] show that the national energy balance is dominated by a heavy reliance on firewood, crop residues, and dung. Due to the dependence on biomass for cooking, CO₂ emissions in Ethiopia have increased from 5.1 million tons in 2005 to 6.5 million tons in 2010.

These policy documents highlight the importance of increasing energy efficiency, expanding energy access and mitigating GHG emissions from energy sector in Ethiopia. This study further explores the implications of these alternative policy scenarios to provide some insights for policymakers.

Ethiopia is endowed with abundant renewable energy resources, including hydro, wind, solar and geothermal power. The potential of hydropower and wind power generation capacity in Ethiopia is estimated to be 45 gigawatts and 1,350 gigawatts, respectively.

Put altogether, energy models for Ethiopia should be able to deal with energy equity, security, and sustainability by gauging the feedback effects, financial and technological ...

The Energy Sector Management Assistance Program (ESMAP) is a global knowledge and technical assistance program administered by The World Bank. It provides analytical and advisory services to low- and middle-income countries to increase their know-how

Ethiopia's energy system is also one of the least diversified systems even by the African standard [106]. Approximately 88%, 9.5%, and 2.7% of the total energy supply comes from bioenergy, petroleum, and electricity, respectively [2]. Fig. 1 presents the trends over the past three decades.

With a share of 92.4% of Ethiopia's energy supply, waste and biomass are the country's primary energy sources, followed by oil (5.7%) and hydropower (1.6%). At the same time the economy is one of the fastest growing in the world, with an average growth of 10,8% since 2005.
