

European energy and Syria

How did Europe influence Syria's electricity sector?

While the US had virtually no involvement in Syria's electricity sector, Europe used to have a considerable influence. European companies bought crude oil, sold refined products, technology, spare parts, and built new power plants.

What type of energy is primarily used in Syria?

In Syria, most energy is based on oil and gas. Some energy infrastructure was damaged by the Syrian civil war. In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society.

Why is Syria's energy sector in turmoil?

Syria's energy sector is in turmoil because of the ongoing civil conflict that began in the spring of 2011, with oil and natural gas production declining dramatically since then. Syria's energy sector has encountered a number of challenges as a result of conflict and subsequent sanctions imposed by the United States and the European Union.

How has the Syrian electricity sector changed over time?

As a result, foreign participation in Syria's electricity sector was highly diversified, and contractors were encouraged to finance their awarded deals with international funds and loans. Sanctions and political and economic instability have considerably changed the profile of the companies involved and the government's modus operandi. 3.1.

What happened to Syria's electricity sector before the 2011 conflict?

Before the 2011 conflict, Syria's electricity sector was trailing other developing countries both in terms of structural and performance indicators, enduring nearly 26% of power losses and 43 days of power outage per year.

How many MW has Syria added to its energy supply?

Between 2007 and 2010, 1,050 MW was added by installing new gas-fired turbines and by expanding two existing power plants.¹¹ To face its energy and electricity supply shortfall, Syria was encouraged by international development funds to explore the possibility of implementing renewable energy projects.

European Energy A/S er en international dansk virksomhed, der udvikler, bygger, driver og ejer energiparker, power-to-X-anlæg og batterilagring. Solar energy continues to be one of the most profitable energy solutions, with panels becoming more efficient and technological developments happening fast. Technologies such as agri-pv where renewable energy production is combined with agricultural growth in the same space show promising results and is an area that we will continue to explore ...

In the 2000s, Syria's electric power system struggled to meet the growing demands presented by an increasingly energy-hungry society. Demand grew by roughly 7.5% per year during this decade, fueled by the expansion of Syria's industrial and service sectors, the spread of energy-intensive home appliances, and state policies (i.e. high subsidies and low tariffs) that encouraged wasteful energy practices. Syria's inefficient transmission infrastructure compounded these probl...
