

Evyon battery Denmark

What is evyon battery energy storage?

Evyon provides a modular DC battery energy storage solution based on repurposed EV batteries for system integrators to integrate into a range of solutions. Scalable to fit your needs. Online-connected to maximize safety, performance, and longevity.

Does evyon have a battery cloud?

Evyon's solution includes a "Battery Cloud", an online platform where users can monitor their own battery system. This gives real-time and historical insight about the system, such as voltage and current. "Using our Battery Cloud, users can be sure that the batteries are safe and reliable for their entire lifespan," says Erdal.

What is evyon EV?

Evyon - originally founded under the name RePack - sprung out of the Antler incubation program during the fall of 2020 as a response to the quickly growing volumes of discarded EV batteries.

What can EV batteries be used for?

Evyon repurposes second-life EV batteries into green battery systems for residential and commercial use. The battery systems can be used for a wide range of stationary storage applications, from peak shaving to storage of solar cell energy for self-consumption. "What differentiates us from similar technology is our data-driven approach.

How long does it take evyon to deliver a battery system?

Evyon can deliver its battery systems in three to four months, compared to six to nine months for new battery systems. Evyon is a dynamic new player in the global stationary battery storage market, which is expected to reach USD 140 billion by 2030.

What is evyon's new energy management system?

This delivery marks a big achievement for a growing start-up like Evyon, before scaling up to series manufacturing later in the year. The recently delivered system consists of two industrial battery strings, with a total of 242 kWh in energy storage capacity, two 50 kW inverters and an energy management system (EMS).

Evyon's proprietary hardware and Battery Cloud ecosystem enable the conversion of EV batteries into high-quality, affordable, and plug-and-play battery energy storage systems. Towards 2030, the amount of discarded EV batteries is estimated to grow to more than 200 GWh per year - the equivalent of more than 3 million EVs. Most of these are ...

Evyon's proprietary hardware and Battery Cloud ecosystem enable the conversion of spent EV batteries into high-quality, affordable, and plug-and-play battery energy storage systems. The company's ambition is to become European-leading in reused batteries by 2025, and world-leading by 2030.

Evyon closed its fourth investment round on November 1st, led by the impact focused venture capital firm Sandwater, and joined by Antler, Wiski Capital and... | 17 kommentarer på ...

Evyon repurposes second-life EV batteries into green battery systems for residential and commercial use. The battery systems can be used for a wide range of stationary storage applications, from peak shaving to storage ...

Evyon achieved a new milestone by delivering its very first pilot industrial battery system to a customer. Two strings were successfully delivered and installed at the customers" site and connected to their solar PV installation.

Evyon can deliver its battery systems in three to four months, compared to six to nine months for new battery systems. MARKET POTENTIAL. Powering up the stationary battery market. Evyon is a dynamic new player in ...

Evyon"s proprietary hardware and Battery Cloud ecosystem enable the conversion of spent EV batteries into high-quality, affordable, and plug-and-play battery energy storage systems. The company"s ambition is to ...

Evyon encompasses many meanings - forever on, EV, ions, view - and flows perfectly with the company"s vision: A fully renewable future for everyone. The name comprises several important elements: ... we work tirelessly to maximize the value of every battery, making our solutions sustainable and accessible. The logo and branding also reflect ...

Evyon develops novel technologies to repurpose second-life EV batteries into modular battery energy storage systems in a streamlined, safe, and cost-effective way. Using second-life EV batteries, Evyon estimates its battery systems to have an up to 95% lower carbon footprint compared to systems based on new battery cells.

Evyon maximizes the value of second-life EV batteries by repurposing them into high-quality energy storage systems in a streamlined, safe, and cost-effective way. We develop novel technologies for reassembly and operations to convert usable second-life EV batteries into modular plug-and-play battery storage systems.

Evyon Industrial is a battery solution for commercial & industrial applications, scalable to your needs. European design, build, and support. Brand new Tier 1 automotive batteries. 24/7 cloud monitoring for maximum safety, performance, ...

Evyon exists to maximize the value of every battery for a fully renewable future for everyone. This we do by combining cutting-edge battery intelligence with the industrialization of repurposing, making repurposed battery systems both ...

Evyon"s Battery Cloud adds 24/7 cloud monitoring to observe trends and anomalies not detectable by the

Evyon battery Denmark

BMS. In the unlikely event that a cell would catch fire, our proprietary integrated fire suppression system effectively stops cell-to ...

To Evyon, the Battery Cloud is a key tool to further extend the understanding of how second-life batteries perform and how to maximize their value to customers. By collecting operational data from the battery systems, ...
