Energy Storage means the storage of energy produced from renewable sources, which is then made available at a later date, even when certain plants are not in operation. The FAAM brand Energy Storage solution, thanks to the use of high quality materials, the structure and composition of the components, and the high level of engineering, provides ...

The FAAM brand Energy Storage solution, thanks to the use of high quality materials, the structure and composition of the components, and the high level of engineering, provides excellent performance in terms of energy storage and release in every situation, condition and moment in which it is required.

Equipped with a special fibreglass separator with newly designed grids, special production processes have been used to achieve extremely high resistance to deep discharge cycles, making it possible to have considerable energy with constant starting power over time even in critical vibration and temperature conditions.

We are excited to announce that FAAM will participate in the upcoming 2023 edition of The smarter E trade fair on Electric Energy Storage section in Munich, presenting our FAAM battery latest innovations and solutions to help drive the ...

We have been present in the battery market since 1974 with customised solutions and a complete Circular Economy model. We produce both lead-acid and lithium-ion batteries, with a strong focus on research and

## Faam energy saving battery Micronesia

development. In Teverola, we have set up a highly innovative plant for the production of cells, modules and lithium-ion batteries.
