

Currently, at Eaglewood Japan Energy Co., Ltd., we are currently operating 5 wind farms and 1 woody biomass power plant in Japan. We have established a power generation and power supply system in cooperation with the local community.

As a service and solution provider, we are focusing primarily on supply stability, which is an issue for the spread of clean energy, battery cost and lack of charging infrastructure, and the potential of fuel cells, which are also issues for the spread of electric vehicles (xEV).

Eaglewood Japan Co., Ltd. develops, manufactures, and sells battery-related products, and also conducts research using data science related to fuel cells. In the battery-related field, we are collaborating with Chinese partner companies to provide products for various uses such as portable, power storage, and in-vehicle applications.
