

Solar Finland ja sen tytäryhtiöt ovat kotimaisen aurinkoenergian moniosaajia vahvalla ja pitkäjänteisellä perustalla. Monipuolinen tietotaito ja yli 40 vuoden kokemus mahdollistavat kehittymisen eri osa-alueilla ja tekevät tuotteistamme ja palveluistamme kilpailukykyisiä kotimaisilla ja ulkomaisilla aurinkoenergiamarkkinoilla.

Solar panels in Helsinki. Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun ...

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts - more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European countries. The Netherlands, in contrast, produce over seven times more per capita.

Meriaura energy: Design, manufacturing and supplying high efficiency solar thermal collectors and absorbers; Solar Fire Concentration Oy: Thermal and optical engineering for cost efficient solar heat systems. Solartukku Oy: Supplier of PV and solar thermal solutions to retailers and partner organizations.

The companies in Solar Finland group are spread throughout the solar PV sectors each covering their own market areas. Whether it is manufacturing solar panels locally, designing and building production lines, or sales, design, and construction of comprehensive turnkey solar solutions, they all belong to the expertise area of Solar Finland.

Solar energy provides multiple opportunities for renewable energy production. Technical potential to utilise solar energy in Europe and even in Finland is several times more than energy consumption in these regions. Economic potential is significantly smaller. However, the cost of solar energy is decreasing rapidly.

Finland is undergoing a major energy transition. Moving away from imported fossil fuels and towards local, clean energy production will create the basis for new industrial investment. In addition to wind power, we also need plenty of solar energy, for ...

Solar energy in Finland is used primarily for water heating and by the use of photovoltaics to generate electricity. As a northern country, summer days are long and winter days are short. Above the Arctic Circle, the sun does not rise some days in winter, and does not set some days in the summer. Due to the low sun angle, it is more common to place solar panels on the south side of buildi...

Solar thermal energy is a cost-effective energy source in Finland when it is used to replace oil heating or electric central heating. It can also be a viable alternative in areas belonging to the district heating network, depending on ...

Solar power generation forecasts are based on weather forecasts, estimation of the total installed solar panel capacity and the estimated locations of the panels in Finland. Fingrid has estimated the installed capacity by using installation statistics published annually by Finnish Energy Authority's that it receives from the distribution system ...

The Finnish Energy Authority states that in 2022, solar power production amounted to nearly 635 megawatts - more than a 240 megawatt increase compared to the previous year. Finland still produces fairly little solar electricity compared to leading European ...
