

Germany sinking products and prices in

Why did German producer prices fall?

The federal statistical agency said producer prices of German industrial products fell 14.7 per cent in the year to September, dragged lower by falling wholesale energy prices. Excluding energy, German producer prices rose 0.8 per cent from a year earlier.

What happened to German energy prices in September?

German energy producer prices dropped 35.3 per cent in the year to September. Prices of intermediate goods, such as metals, wood and fertiliser, also fell 4.2 per cent year on year.

How have food prices changed in Germany?

Food imports, supply, and delivery routes have been affected, prices went up and German inflation levels increased noticeably as well, though these have decreased again in recent months. Discover all statistics and data on Food prices in Germany now on [statista.com](https://www.statista.com)!

Are German discounters committed to sustainability?

Suppliers, meanwhile, argue that extra burden is heaped on them by sustainability regulations, such as certification schemes or Germany's due diligence act, which forces large companies to ensure their products do not contribute to labor or environmental violations. " [German discounters] say they are committed to sustainability...

How does price pressure affect Germany's supply chain?

"Through price pressure and market power, they can determine who enters the German market and who does not," said Steffen Vogel, a global supply chain expert from Oxfam. He added that Germany's four big retailers have established a market concentration of 87 percent at home and thus hold a gatekeeping function.

What's going on with German industrial production?

German industrial production is in steady decline and, excluding Covid, is hovering around a 10-year low. BASF, the largest chemical producer in the world, has lost a third of its stock market value since the energy shock. And major steel producer Thyssenkrupp has closed a plant and is curtailing production.

2 ???· Traditional Bismarck herring can be hard to come by in Germany these days. Getty Images. News. Europe. In a pickle: How Germany's herring shortage symbolises an economy gone to rot. Country is experiencing winter of discontent, with tide having turned against its once-envied economic model. Tim Stickings.

3 ???· Wholesale prices in intraday trading ranged near 1,000 euros per megawatt hour on Thursday (12 December), more than ten times the average price throughout the rest of the year. Germany was forced to fire up its fossil fuel plant fleet and had to purchase electricity from abroad to cover its demand as a result of

the low renewable power output.

Instead, Keim entered a troubling new normal, where energy prices are double those of overseas rivals. That reality is slowly eroding thousands of similar companies across Europe's industrial heartland. Germany, Europe's manufacturing powerhouse, has fallen into a recession expected to extend through the year's end.
