Does Puma Energy have solar power in Ghana?

The solar power generation at 11 of the 14 sites is supported by battery storage. The combined solar and battery power systems in 14 service Stations and terminals in Ghana are part of Puma Energy's Future Energies business wider business plan to roll renewable energy projects around the world.

How many solar projects does Puma Energy have?

Puma Energy's newly established Future Energies business launches 11 solar projects at its retail stations and a further three at Puma Energy's terminals in Ghana. The solar power generation at 11 of the 14 sites is supported by battery storage.

What is Ghana's solar energy potential?

These projects benefit from Ghana's high solar energy potential and have a total capacity of 422kW and associated battery storage of 224 kWh and can provide up to 100% of a site's energy.

Is solar a viable energy alternative for Ghanaians?

The idea that solar has less-to-no on-going maintenance cost apart from other advantages such as its portable nature and efficiency makes it a worthy energy alternative for Ghanaians. Public private partnerships (PPP) have formed the backbone to many major solar projects in Ghana.

How can Ghana benefit from solar energy?

Ghana stands to benefit massively especially in the area of solar development if the right atmosphere is created to promote private sector participation in the energy sector. South Africa and Morocco have invested heavily in solar energy and are known to be the major leaders in Africa.

What is Puma Energy's Future Energy Plan?

Puma Energy aims to deploy solar and/or battery storage in at least 75% of company-owned retail sites, depots and terminals in the world by 2023. Future Energies is also scaling the rollout of solar hybrid systems to other nations with high solar energy potential including Puerto Rico, Nicaragua, Honduras and Papua New Guinea.

Multinational oil company Puma Energy said it has installed solar power systems and battery storage units at several of its locations in Ghana. Solar panels with a combined total capacity of 422 kWp were installed at 11 retail service stations and three Puma Energy terminals. At 11 of the 14 sites, the company backed solar with storage capacity ...
