

The Little Green Energy Company have just installed 309 roof mounted solar panels with Guernsey Electricity Limited on the power station, Northside, Vale, creating the largest solar array in the Channel Islands, generating over 100kWp of power.

Guernsey Electricity has announced that the Little Green Energy Company will put up hundreds of solar panels on the roof of a building on Northside, Vale, generating power that will be fed back into the grid. The panels could produce the equivalent energy needed to run around 50 electric vehicles annually.

The Little Green Energy Company has commended the recent decision by government to zero-rate the Standby Charge for all solar photovoltaic installations in Guernsey. The decision marks a significant stride towards embracing renewable energy and fostering a more sustainable future for the island.

The Little Green Energy Company stepped in when our photovoltaic solar panel provider went bankrupt in the middle of installing 48 panels. It is a pleasure to deal with The Little Green Energy Company. They are professional, knowledgeable and reliable. Three characteristics that are so important to every client and so rarely found in this industry.

Imagine a building operating system where electrical equipment can talk to each other, sharing energy usage data and determining the optimum way to run. JD: What impact could ZEBs have on Guernsey? PF: The ultimate impact would be to create a zero-energy island.

Green Hydrogen is generated from renewable energy and water to produce a gas that produces almost zero greenhouse gas emissions when combusted. To introduce hydrogen, a number of challenges need to be solved: we need hydrogen-ready boilers, hydrogen-ready networks, regulation changes and a steady surplus of renewable energy to make the gas.

Guernsey Electricity and The Little Green Energy Company have together completed works to install a vast community-scale solar array on the roof of the newly reopened Grow headquarters. The newly installed 310 photovoltaic (PV) panels will produce 129-kilowatt peak power (kWp), enough electricity to supply power to approximately 40 homes.

Guernsey Electricity and The Little Green Energy Company have been working together on the project, with the 310 photovoltaic panels able to produce 129-kilowatt peak power. Originally, Grow Ltd had planned for a smaller, private array at its headquarters, but the idea grew to become a Guernsey Electricity-owned community solar PV scheme, to ...

Managing Director at The Little Green Energy Company | Guernsey &#183; I am an experienced company
