Is solar feasible in Greenland?

In this work we investigate potential solar feasibility in Greenland using the village of Qaanaaq, Greenland as a case study to demonstrate several optimized energy scenarios. 1.1. Alternative energy in the arctic Both wind turbines and solar photovoltaic (PV) are mature technologies.

Can solar PV be used in Greenland?

Alternative energy in the arctic Both wind turbines and solar photovoltaic (PV) are mature technologies. Despite being mature, use of solar PV in Greenland on a community scale is limited.

Should Greenland invest in solar energy?

Even without a change in the one-price model, government investment in solar energy for communities around Greenland will lower Nukissiorfiit's dependence on fossil fuel which would help to reduce the associated large ongoing deficits incurred by Nukissiorfiit . Table 8. Annual cost savings in USD/ Year for Solar-BES-diesel hybrid scenarios.

How much do solar panels cost in Greenland?

Solar power is not widely used in the far north of Greenland. Therefore, there is little comparison for costs of panels, transportation, and installation. In Sarfannguit, Greenland, PV prices were estimated at 2800 USD/kW in 2014 . In the Canadian Arctic, panel price estimates have exceeded 5000 USD/kW in 2019 and 2020 ,.

Does Greenland have a place-based approach to energy production?

The lack of electricity transmission between urban settlements in Greenland necessitates a place-based approach to energy production. In keeping with this, this case from Greenland is intentionally laid out differently to the others in the Handbook.

Can solar energy reduce fossil fuel costs in Greenland?

Dramatic and ongoing reductions in the cost of solar energy and battery storage combined with copious sunlight for seven months of the year suggest that solar and storage could play an important role in reducing costs and dependence on fossil fuels in Greenland and elsewhere in the far north.

Greenland, which is highly dependent on imported oil and already experiences substantial climate impacts, needs to transform its energy system. This novel study has shown technically feasible and economically viable full sector energy transition pathways towards a 100% renewable energy system.
