

The mounting has been developed by Pacific Solar & Photovoltaics and is structurally engineered to withstand typhoon winds up to 170mph sustained winds, which meets Guam's building code requirements. This is a unique and specific mounting system for Guam's high wind load and harsh environmental conditions.

A team from the National Renewable Energy Laboratory (NREL) visited Guam in August 2023 to assess failure modes of solar photovoltaic (PV) systems as a result of Category 4 Typhoon Mawar and to provide recommendations to increase the resilience of PV systems on Guam.

A novel PV blind-integrated Trombe wall module (PVBTW) was first designed and constructed in the present study. A series of experiments were carried out to measure and analyze the impact of different inlet air flow rates and PV blind angles on electricity generation and heat gains of the PVBTW module.

The Guam Power Authority is moving ahead with Phase 4 of its renewable energy integration plans and is seeking to get approval for two 25-year renewable energy purchase agreements, one for KEPCO...

AB - A team from the National Renewable Energy Laboratory (NREL) visited Guam in August 2023 to assess failure modes of solar photovoltaic (PV) systems after Typhoon Mawar and to provide recommendations to increase the resilience of PV systems on Guam.

This Technical Memorandum was prepared by Winzler & Kelly (W& K) on behalf of the Guam Power Authority (GPA) in support of GPA's Integrated Resource Plan (IRP). The purpose of the memorandum is to summarize W& K's evaluation of various Guam properties for potential use as a photovoltaic (pv) solar power plant.

The Guam Power Authority wants to award two major contracts for solar farms in Dededo and S&#229;nta Rita-Sumai, the first two in a series of projects which are anticipated to add a huge 330...
