Will China build a global power grid?

The technology acts as a key component in China's proposal to build a global power grid, known as the Global Energy Interconnection. The idea - announced by China's president Xi Jinping at a United Nations summit in 2015 - is to link up national grids over the next three decades.

Why is power grid so complicated?

Power grid is a typical complex system, and there are many factors involved in its operation, including static and dynamic constraints. Furthermore, these factors are deeply intertwined, making things more complicated.

NSR: What is the status of power grid development in China?

Why should the power grid keep a balance between generation and consumption?

Xue: The grid must keep a balance between electricity generation and consumption in real time, so as to reduce the risk of electricity congestion and to keep the synchrony among all generators online. Theoretically, any disturbance will spread out in light speed over the whole power grid nationwide.
