

Heess energy solution Iran

What is Hess sustainability?

Learn about Hess sustainability efforts, and its goal to help meet the world's increasing demand for energy while sustaining long-term profitable growth.

What is Iran's energy production?

Energy production in Iran is dominated by its low priced fossil fuel resources such as crude oil and natural gas that can exhibit economic and environmental issues .

Can a biomass-based power plant be a reliable electrification option in Tehran?

Tehran is one of the most populous and polluted cities in Iran with a fossil fuel-dependent economy. This paper aims to assess a techno-economic and environmental feasibility of biomass-based power plant in off-grid mode to present optimal planning for reliable electrification to Tehran.

Is Hess ready for the transition to a low carbon economy?

In 2021, Hess achieved the highest level rating (Level 4-strategic assessment) by the Transition Pathway Initiative (TPI), a global initiative that assesses companies' preparedness for the transition to a low carbon economy and their efforts to address climate change.

How much electricity does Iran need?

According to several reports, electricity demand in Iran is 50,000 MW, that is approximately 80 % of what is supplied by the fossil resource consumption. It has been expected that this amount will reach 200,000 MW in 2030 . Consequently, fossil energy resources will not be able to cover the growing demand .
