

Does Honduras have solar power?

Honduras has a large potential for solar photovoltaic generation. In fact, it is a practical solution for servicing energy-isolated rural communities. In 2007, there were about 5,000 individual Solar Home Systems, with an average size between 30 Wp and 50 Wp, which makes up for a total capacity of approximately 15 to 25 kW of power.

Can Honduras generate electricity based on hydropower?

In Honduras, there is a large potential for electricity generation based on hydropower. In 2003 then President Ricardo Maduro put in place a Special Commission for the Development of Hydroelectric Projects. There are 16 new hydro projects that are expected to be commissioned before 2011, with an overall capacity of 206.5 MW.

What type of energy is used in Honduras?

Solar photovoltaic (PV) energy followed at 18.9%, with wind power at 12.9%, and geothermal energy at 5.8%. Due to the diversity of the Honduran landscape, the potential for wind development varies considerably. A 100 MW wind project was built in 2012.

Can Honduras generate electricity from biomass?

Honduras has a large potential for electricity generation from biomass, mainly from the sugar industry. Currently, there are nine biomass projects in operation, with a total of 81.75 MW installed capacity. These plants are estimated to supply 2.3 percent of the total demand of energy in Honduras for 2007.

How many hydro power plants are there in Honduras?

There has been an intensive use of small- and medium-scale hydro energy, with 14 out of 16 existing hydro plants with capacity below 30 MW. Two large plants ( El Cajón Dam (Honduras) and Rio Lindo) account, however, for more than 70% of the total capacity. In Honduras, there is a large potential for electricity generation based on hydropower.

What is Honduras' energy mix?

In 2021, Honduras' energy mix was led by oil, constituting 52.3% of the total energy supply, followed by biofuels and waste at 33.7%. Modern renewables, which exclude traditional biomass practices like burning wood or agricultural residues, accounted for 13.7%, while coal made up just 0.3%.

Gamesa Electric, a leading global provider of solar photovoltaic (PV) solutions, has secured the largest solar PV project in Honduras, a testament to its unwavering commitment to sustainable energy. This monumental project involves the supply of solar power stations and control systems for a 53.31 megawatt-peak (MWp) project, poised to ...

The plant has installed Gamesa Electric Photovoltaic Solar Stations. The project is part of an energy sale agreement (PPA) with the National Electric Energy Company (ENEE) of Honduras for 20 years and which is expected to provide 73,000 MWh of electricity per year and to reduce carbon emissions by nearly 40,000t per annum.

OverviewEnergy sourcesLegal and policy frameworkSee alsoSources In 2021, Honduras' energy mix was led by oil, constituting 52.3% of the total energy supply, followed by biofuels and waste at 33.7%. Modern renewables, which exclude traditional biomass practices like burning wood or agricultural residues, accounted for 13.7%, while coal made up just 0.3%. Currently, 33 percent (502 MW) of the installed capacity of the national interc...

Honduras: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across all of the key metrics on this topic.

Honduras: Many of us want an overview of how much energy our country consumes, where it comes from, and if we're making progress on decarbonizing our energy mix. This page provides the data for your chosen country across ...

The report finds that Honduras has high-quality solar potential for electricity production. The country has also large untapped biomass resources in the form of cane bagasse and palm oil waste. Comprehensive renewables ...

Honduras: Solar electricity generation, billion kilowatthours: The latest value from 2022 is 1.19 billion kilowatthours, an increase from 1.14 billion kilowatthours in 2021. In comparison, the world average is 6.73 billion kilowatthours, based on data from 190 countries.

Specifically for Honduras, country factsheet has been elaborated, including the information on solar resource and PV power potential country statistics, seasonal electricity generation variations, LCOE estimates and cross-correlation with ...

The report finds that Honduras has high-quality solar potential for electricity production. The country has also large untapped biomass resources in the form of cane bagasse and palm oil waste. Comprehensive renewables projects could offer benefits to local communities, and add installed capacity in the electricity sector.

Honduras has a large potential for solar photovoltaic generation. In fact, it is a practical solution for servicing energy-isolated rural communities. In 2007, there were about 5,000 individual Solar Home Systems, with an average size between 30 Wp and 50 Wp, which makes up for a total capacity of approximately 15 to 25 kW of power. [1]

Solar PV: Solar resource potential has been divided into seven classes, each representing a range of annual PV

output per unit of capacity (kWh/kWp/yr). The bar chart shows the proportion of a country's land area in each of these classes and the global distribution of land area across the classes (for comparison).

Map with solar irradiation and PV power potential in Honduras. The GIS data (AAIGRID and GEOTIFF) stems from the Global Solar Atlas ([link](#)). The link also provides a poster size (.tif) and midsize map (.png). The Global Solar Atlas is continuously updated.
