

Do I need a solar monitoring system?

While not essential, a solar monitoring system is like having a personal trainer for your solar panels. It provides real-time data about the performance of your solar panels, helping you spot any issues and optimise your system's performance. Average UK prices for the solar components:

What is a solar monitoring system?

A solar monitoring system allows you to keep track of the output of your solar panels. A solar monitor is usually installed at the same time your solar panels are installed. There are also aftermarket solar monitors, some of which also function as home energy monitors.

How to monitor a solar panel system?

Monitoring your solar panel system's day-to-day performance helps in identifying any anomalies. Observing energy generation patterns, tracking energy production with a generation meter, and comparing power output with previous days or months are good practices in monitoring system performance.

How to install solar panels?

Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5. Erect the scaffolding (this can be done by your supplier or by a company you organise) 6. The solar panel mounts will be installed 7. The professionals will install the solar panels 8.

Is it a good time to install solar panels?

Hopefully you feel more confident about the process of installing solar panels. With 69% of people telling our National Home Energy Survey that they're likely to buy or rent a home with solar panels, now is a great time to go solar.

Should you consult a solar panel installer for maintenance checks?

In case of significant energy production decrease, it is advisable to consult solar panel installers for maintenance checks. Staying on top of your solar panel system's maintenance can be a breeze with a maintenance logbook. Here's why it's a good idea: A logbook allows you to keep track of all maintenance activities.
