

# How to lay photovoltaic solar panels flat

Can solar panels be installed on a flat roof?

Yes, you can successfully install solar panels on the flat roof of your home or business. However, there are some challenges to be aware of. Flat roofs have a minimal slope allowance that will accommodate solar PV panel systems. A roof having a rise of 0.25 inches over a 12-inch run -- known as a 0.25:12 pitch roof -- is considered a flat roof.

How far apart should solar panels be on a flat roof?

However, as a general rule of thumb, you need about one metre between each row of solar panels on a flat roof. Building and safety regulations also require a minimum distance of 0.5-1m between the solar panels and the edge of the roof. Where is the best place to put solar panels on a roof?

How do flat roof solar panels work?

Flat Roof Solar panels are usually mounted onto a tub, and weighed down by ballast (gravel, paving slabs, bricks, rocks etc) in order to resist high winds. Or alternatively, the panels are mounted onto metal frames. This is usually determined by the building structure and location. Your home will benefit from green, clean, renewable energy.

Can a flat roof solar system be installed on a domestic property?

Whilst flat roof solar systems are more commonly used on commercial buildings, they can certainly be fitted onto domestic properties too.
