The eco px integrated Hybrid system manages the network site power from end-to-end, offering substantial operating costs reduction, security, reliability and a huge carbon footprint improvement. The operator is fully satisfied with the solution and awards AEG Power Solutions a contract for another site .

AEG Power Solutions announces that the first ecopx hybrid power station is now fully operational. The complete integrated solution was part of a contract signed with OPT (Office des Postes & Telecommunications) in New Caledonia last year. It combines solar and wind energy with batteries, and a genset as emergency back-up.

By commissioning this totally green electrical substation in New Caledonia, ENGIE Solutions has just taken another globally significant step forward on the road towards a carbon-free future using smart networks. *An electrical substation is a transformer substation that enables low voltage power (from 380 to 220 volts for a

The French overseas territory of New Caledonia has hailed the switch-on of a 16MWp solar farm, with battery energy storage to be later attached, and another standalone 5MWh battery project as significant steps towards "100% renewable energy" targets.

Nov 29 - Total Quadran has started up the largest hybrid power plant combined with energy storage to harness the ample solar power potential of New Caledonia, a French overseas territory. With an installed capacity of 16 MW-peak, the plant also features a 10 MW lithium-ion energy storage system.

The ecopx integrated Hybrid system manages the network site power from end-to-end, offering substantial operating costs reduction, security, reliability and a huge carbon footprint improvement. AEG Power Solutions has received a contract from OPT for another BTS site near Lac de Yate, in the south of the mainland.

To meet the broad range of power range, the first eco hybrid power station by AEG Power Solutions has now started working. The complete integrated solution was part of a contract signed with OPT (Office des Postes & Telecommunications) in New Caledonia last year.

The distribution operator has already found that its advanced, green EcoStruxure-ready substation, which uses SF6-free MV switchgear technology combined with a connected new generation transformer, advances DER

Hybrid on grid New Caledonia

use and prepares EEC Engie for smart grid deployment. The new substation also allows EEC Engie to remotely manage its substation and ...

Energy Pool and Enercal are pioneering advanced microgrid solutions to support New Caledonia's transition from diesel generators to zero-carbon energy sources like PV and biofuels. A smart energy management system (EMS) to maximize PV integration
